

DetroitDartCube

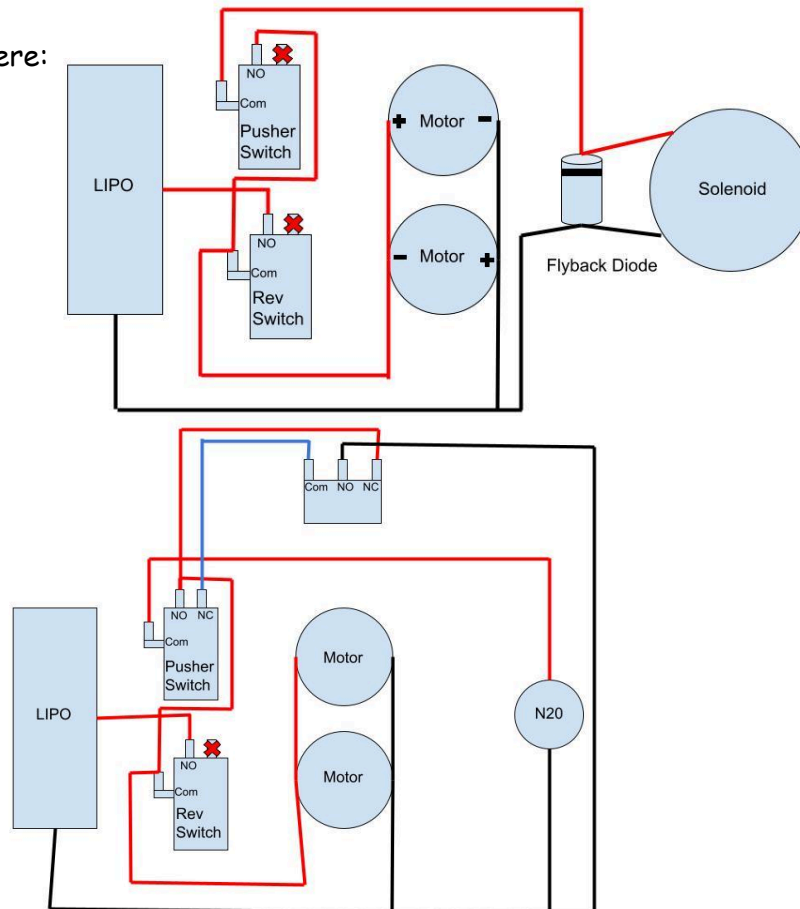

When April Fools gets too real

- Yes, I actually made it.
- No, I haven't test printed it.
- Does it work? Probably.
- What do you need to make it? More than a roll of filament.
- Did I really make this doc in comic sans? Yeah. Get fucked.

Steps:

1. Print a straight talon flycore w/ the mag detent (not the one with the little triangle. You gotta yonk the mags out like a real nerfer). You can also use a noidcore. DartCube don't care.

2. Wire it up. See here:

3. Print the DartCube. Love the DartCube. Use supports on the Base, and on the battery door overhang of the Cube. Other stuff shouldn't need them but the Grips can benefit (also brims for those bad boys aren't the worst idea if your printer likes to make your prints fall over).
4. Wait well over a day for everything to print and reflect on your life and the choices you made to get you to this point.
5. Heatsets. Like 9 in addition to the 8 in the sides of the flycore. You don't need one in the front of the flycore for once. Throw in 6 more if you want to do the picatinny rail version (2 per rail).
6. Everything is m3 x 8mm screws. Enjoy.
7. Print the muzzle in orange so someone doesn't mistake this for a real firearm.
8. Stick the flycore in the Base.
9. Stick the Switches and Triggers in the Grip. Then put the other side of the grip on and screw those bad boys together.
10. Stick the grip in the base.
11. Insert the base/grip assembly into the Cube. Be gentle unless the cube has given you consent otherwise.
12. Screw shit together
13. Thread the muzzle on so people know its not a gun.
14. Put the battery door in place and thumbscrew that bad boy in, or use a normal screw like a weirdo.
15. Go run around and shoot darts at things and when it doesn't work right figure it out I guess.

16. Have fun.

Or don't. I'm not your boss.

"Fuck you" to everyone who encouraged me to make it real. I love you all. *Get fucked.*
